

Balance

MECHANISMS

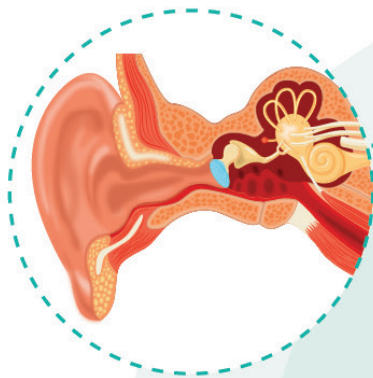

visual

Spatial, motion and depth perception
Eye coordination
Stable Gaze
Clear Vision

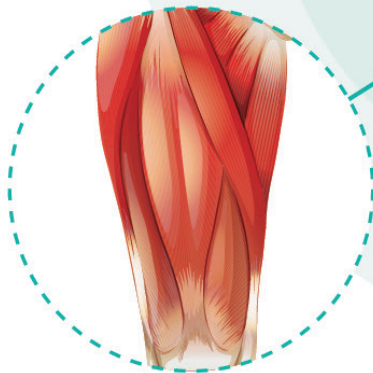

brain

The brain receives the information processes it, sorts it, and integrates it.

vestibular

Rotational movement
Linear movement
Equilibrium
Gravity

Brain sends impulses to the muscles that control movement, to coordinate posture and balance.

proprioception

Sense of body positioning
Joints
Muscles
Skin

balance

Balance is maintained by the complex system of sensory inputs and motor control.
